**DNA extraction from CpGV granules (baculovirus)**

**Direction Generale de l’Armement, Centre d’Etudes du Bouchet - France**

**CONTEXT**

Research and financial efforts spent on biodefense technologies highlight the current concern for bioterror event preparedness. Nonhazardous but relevant “simulant” microorganisms are typically used to simplify technological developments, testing, and staff training.

With this work, we investigated a new candidate, *Cydia pomonella granulovirus* (CpGV), for simulating large double-stranded DNA virus threat agents such as smallpox. CpGV belongs to the baculovirus family and is currently used as a pesticide. We developed an assay based on real-time PCR to provide a molecular tool to detect and quantify this model virus.

**MATERIAL**

- Precellys®24
- Precellys® kit: 03961-1-005 (glass beads 0.1 mm)
- Sample: occlusion bodies of CpGV named granules
- Buffer: 100 µl of a solution of yeast RNA 0.1mg/ml (to saturate the surface of glass beads)
- Centrifugal instrument
- Real-time PCR

**PROTOCOL**

- Precellys®24: 6500 rpm, 45sec.
- Centrifugation: 4000 rpm, 1 min.
- DNA purification.
- Analysis: Real-time PCR assays.

**RESULTS**

We designed PCR primers and a probe for a specific gene that encodes a structural protein of CpGV. In a preliminary quantitative PCR (qPCR) assay, where no DNA standard was added, the success of this assay was assessed by checking with two different samples of CpGV DNA the presence of an amplicon with the expected size (59 bp) and showed in the figure 1.

![Figure 1: Agarose gel electrophoresis of amplicons produced by the qPCR assay. Lane 1, 20-bp ladder; lanes 2 and 3, PCR products from two different template CpGV DNA samples; lane 4, 100-bp ladder.](image)

The specificity of our qPCR assay against a large panel of potential cross-reactive microorganisms was checked, and the suitability of the assay for environmental samples, especially aerosol studies, was determined.

In conclusion, we suggest using *Cydia pomonella granulovirus* as a simulant of variola virus for biodefense technologies studies.

**CONCLUSION**

The use of Precellys®24 allows the homogenization of the samples leading to efficient DNA extraction from compact microorganisms such as *Cydia pomonella granulovirus* (CpGV) granules.

Precellys®24 was easy to use, simple and fast.
